From: Asbestos Control Program
To: DEQ Asbestos Online Submission Notice;
Subject: Project Permitting
Date: Monday, June 18, 2012 4:23:43 PM

This past week, the Asbestos Control Program (ACP) discussed project permitting.

In some cases, an owner, specs or contract may require an asbestos project to be permitted through the ACP that would otherwise not need to be permitted (i.e. less than 1% asbestos, less than 3 linear or square feet, removal in a non-regulated manner, etc.). If a permit is issued, the conditions listed on the permit and permit application must be adhered to (i.e. project design, work practices, engineering controls, etc). This is the responsibility of the on-site asbestos project contractor/supervisor. Further, the ACP must be informed of changes during the project and a permit revision submitted by the operator (i.e., contractor) or owner.

As always, if you have questions, contact the ACP at 406-444-5300 or email us at deqacponline@mt.gov.
