2012 IECC section 403.2.2 requires testing of all ductwork located outside conditioned spaces such as in attics and unheated garages.

The labels below were designed by the Bozeman Building Department and are a convenient way to notify plan review that ductwork testing is required. Testing is not required if all ductwork and air handlers are moved into conditioned spaces.

These labels are available from the Montana Department of Environmental Quality or can be printed from the attached page. The labels are designed to be printed on 2 inch by 4 inch labels.
Testing for tightness is required if ductwork is located outside of a conditioned boundary, such as in an attic or garage.

Section 403.2.2 IECC 2012

Testing for tightness is required if ductwork is located outside of a conditioned boundary, such as in an attic or garage.

Section 403.2.2 IECC 2012

Testing for tightness is required if ductwork is located outside of a conditioned boundary, such as in an attic or garage.

Section 403.2.2 IECC 2012

Testing for tightness is required if ductwork is located outside of a conditioned boundary, such as in an attic or garage.

Section 403.2.2 IECC 2012

Testing for tightness is required if ductwork is located outside of a conditioned boundary, such as in an attic or garage.

Section 403.2.2 IECC 2012

Testing for tightness is required if ductwork is located outside of a conditioned boundary, such as in an attic or garage.

Section 403.2.2 IECC 2012

Testing for tightness is required if ductwork is located outside of a conditioned boundary, such as in an attic or garage.

Section 403.2.2 IECC 2012

Testing for tightness is required if ductwork is located outside of a conditioned boundary, such as in an attic or garage.

Section 403.2.2 IECC 2012

Testing for tightness is required if ductwork is located outside of a conditioned boundary, such as in an attic or garage.
