

CHARGE AHEAD MONTANA

William Woodhouse
Owner of a 2014 Tesla P85D

What made you decide to buy an electric vehicle?

I liked the way they drive, liked the performance. I was also tired of polluting... and wanted to produce my own power.

What's your favorite part about owning an electric vehicle?

Its performance—it's fun to drive and there's no gas cost.

What's been the most challenging part of owning your electric vehicle?

The distance between Supercharge stations, especially in the winter. Sometimes a longer route is needed.

Have you had any problems with it during the winter?

No, you make adjustments in range for the heater and less efficiency.

Have you ever taken it on a trip? If so, where to?

I've gone all over the Northwest, as well as Oshkosh, Chicago, Denver, Las Vegas, Yosemite National Park, and San Francisco. I picked the car up in Portland and have driven 100,000 miles on an energy cost of less than \$100, because Tesla provided free fast charging to the early cars sold.

Would you recommend an electric vehicle to someone considering buying a new car?

I will never buy a new gas car again! I have my name in for the new Tesla Pickup.
