Public Scoping Memorandum
Montana Limestone Resources, LLC, Operating Permit 00186
Environmental Assessment
Drummond, Montana

Revised October 4, 2019
July 11, 2019

Introduction

The Montana Department of Environmental Quality (DEQ) is preparing an environmental assessment (EA) to disclose the potential environmental impacts of a proposed Operating Permit (Pending 00186) for a limestone quarry and plant to produce lime (project) to be constructed and operated by Montana Limestone Resources, LLC (MLR) approximately 2.5 miles west of Drummond, Montana (MT). The EA is being prepared to meet the requirements of the Montana Environmental Policy Act (MEPA) and will help DEQ managers determine whether MLR’s application for an Operating Permit should be approved.

Under MEPA, the first phase in preparing an EA is to conduct “scoping.” The purpose of scoping is to identify the environmental issues associated with the proposed project. For this EA, DEQ conducted scoping using an interdisciplinary team (IDT) of technical experts and by requesting comments from federal, tribal, state and local governments and interested persons and groups. Commenters were asked to help DEQ and the IDT identify issues likely to involve adverse impacts and possible alternatives to be considered in the EA.

This report documents the results from the public scoping process, conducted between May 20 and June 19, 2019. The main sections of this report are:

- Public scoping activities
- Scoping results

Proposed Project

MLR submitted an Operating Permit application for the construction and operation of a proposed permit area. If approved, the Operating Permit would allow MLR to construct and operate a limestone quarry and plant to produce lime on property owned by Washington Limestone, LLC, in Granite County (Figure 1).

The project would consist of a pit, plant, waste stockpiles, topsoil stockpiles, impoundments, haul roads, and an access road from State Highway 1 to the permit area. The permit boundary
for the project is 546.4 acres with the quarry and plant consisting of 505.8 acres and the access road consisting of 40.6 acres. The project would disturb 209 acres within the permit boundary.

The Operating Permit application is available for the public to view at DEQ’s main office in Helena (1520 East 6th Avenue), or it can be viewed by visiting DEQ’s website (http://deq.mt.gov/Land/hardrock/mlr_apppg). DEQ determined that MLR’s application was complete and compliant and, on May 13, 2019, issued MLR a draft Operating Permit for the proposed project. DEQ is now preparing an EA in compliance with MEPA.

Public Scoping Activities

Public scoping provides an opportunity for public and agency involvement during the early planning stages of the analysis. The intent of the scoping process is to gather comments, concerns, and ideas from those who have an interest in or that may be affected by the proposed project. Several methods were used to inform the public of the 30-day scoping period (May 20 - June 19, 2019) and to solicit comments. These methods included a press release, legal notice, distribution of a scoping post card, and tribal consultation scoping letters. Each of these public involvement activities is described below.

Press Release and Legal Notices

On May 20, 2019, DEQ sent a news release announcing the scoping period to media outlets and the MT Governor’s Office via email. Legal notices were published in the Montana Standard and The Missoulian announcing the scoping period on May 20 and May 27, 2019.

Scoping Post Cards

DEQ also sent a post card on May 17, 2019, announcing the scoping period to a mailing list of about 60 people, consisting of the following:

- Elected officials and local governments
- State and federal agencies
- Adjacent and nearby landowners

The postcard briefly described the proposed project, identified the project location, and provided information on how to submit comments during the scoping period. See Appendix A for a copy of the post card.

Tribal Consultation

DEQ distributed a tribal consultation scoping letter to 25 tribal representatives via certified U.S. mail on May 20th, 2019. Like the postcard, the letter invited the recipients to comment on the proposed Project and included a brief description of the Project. See Appendix A for copies of each tribal consultation scoping letter.
Scoping Results

Methods for Comment Collection and Analysis

The objective of the scoping process was to gather comments, questions, and concerns from the public regarding the proposed project. DEQ was prepared to collect comments in the form of written submissions sent via U.S. mail and e-mails.

Scoping Results & Issue Summary

During the public scoping process, DEQ received one comment letter in the format of an email. The comment came from a nearby landowner.

Because only two comments were received, a formal content analysis process was not conducted. The commenters raised concerns about potential adverse impacts of the project on the following environmental resources:

- noise
- air quality
- groundwater quantity and quality
- aesthetics

The comments submitted during the public scoping period can be found in the project’s Administrative Record and in Appendix B.

Next Steps

Information collected during the scoping period will assist DEQ in the development of alternatives and impact analyses for the Draft EA. See Table 1 for the tentative EA schedule. DEQ will develop alternatives or modifications in the EA that would appreciably accomplish the same objectives or results as MLR’s proposal and reduce or eliminate impacts.

There will be a review period after the Draft EA is released during which the public can submit comments on the Draft EA.

Figure 1. Project Location
Appendix A. Scoping Outreach Materials
Montana Limestone Resources, LLC Mine EA Scoping Period

The Montana Department of Environmental Quality (DEQ) is preparing an Environmental Assessment (EA) for Montana Limestone Resources, LLC’s proposed operating permit for a limestone quarry and plant to produce lime, located about 2.5 miles west of Drummond, Montana, in Granite County. Approval of the operating permit would result in the development of the 546-acre permit area.

The first phase in preparing an EA is to conduct “scoping” to identify the environmental issues associated with the proposed project. DEQ is seeking public comments on the project to help identify issues, including potential impacts and possible alternatives to be considered in the EA.

You may submit your comments on the proposed project electronically (mlr-ea@eroresources.com) or by postal mail to the following address: Jen Lane, MEPA Coordinator, Montana Department of Environmental Quality, PO Box 200901, Helena, MT 59620-0901. Please include your address, phone number, and e-mail address in your comment. Questions on the environmental review may be directed to Jen Lane at jlane2@mt.gov or (406) 444-4956. All comments must be received or postmarked by June 19, 2019.

RE: Tribal Consultation on the Proposed Montana Limestone Resources, LLC Mine Environmental Assessment

Dear President Werk,

You are invited to participate in the Montana Department of Environmental Quality’s (DEQ) environmental review process for Montana Limestone Resources’, LLC (MLR), proposed operating permit for a limestone quarry and plant to produce lime, located about 2.5 miles west of Drummond, Montana, in Granite County (see attached map). Approval of the operating permit would result in the development of the 546-acre permit area. The permit application is available for the public to view at DEQ’s main office in Helena (1520 East 6th Avenue). The application may also be viewed by visiting DEQ’s website (http://deq.mt.gov/Land/hardrock/mlr_apppg).

DEQ determined that MLR’s application was complete and compliant and, on May 13, 2019, issued MLR a draft operating permit for the proposed project and is now preparing an environmental assessment (EA). The EA is being prepared to meet the requirements of the Montana Environmental Policy Act (MEPA) and will analyze the potential impacts of the proposed project.

Under MEPA, the first phase in preparing an EA is to conduct “scoping.” The purpose of scoping is to identify the environmental issues associated with the proposed project. An interdisciplinary team of technical experts is currently working to determine the scope of the analysis to be contained in the EA. DEQ is asking for comments from tribal governments to help identify issues and possible alternatives they would like to be considered in the EA. The scoping period began Monday, May 20, 2019 and ends Wednesday, June 19, 2019. You may submit your comments on the proposed project electronically at mlr-ea@eroresources.com or by postal mail to the following address:

Montana Department of Environmental Quality
Attn: Jen Lane, MEPA Coordinator
PO Box 200901
Helena, MT 59620-0901
In addition to scoping under MEPA, DEQ is required to consult with and obtain the comments of Montana tribal governments that may be directly impacted by a project under Section 75-1-201(1)(c), MCA. Throughout the environmental review process, DEQ staff would be happy to provide additional information and to discuss any issues that the Council may raise regarding the proposed project. If you have specific questions regarding the project please feel free to contact myself or Jen Lane, the MEPA Coordinator, at any time during the environmental review process:

The permit application is available for the public to view at DEQ’s main office in Helena (1520 East 6th Avenue). The application may also be viewed by visiting DEQ’s website (http://deq.mt.gov/Land/hardrock/mlr_apppg).

DEQ determined that MLR’s application was complete and compliant and, on May 13, 2019, issued MLR a draft operating permit for the proposed project and is now preparing an environmental assessment (EA). The EA is being prepared to meet the requirements of the Montana Environmental Policy Act (MEPA) and will analyze the potential impacts of the proposed project.

Under MEPA, the first phase in preparing an EA is to conduct “scoping.” The purpose of scoping is to identify the environmental issues associated with the proposed project. An interdisciplinary team of technical experts is currently working to determine the scope of the analysis to be contained in the EA. DEQ is asking for comments from tribal governments to help identify issues and possible alternatives they would like to be considered in the EA. The scoping period began Monday, May 20, 2019 and ends Wednesday, June 19, 2019. You may submit your comments on the proposed project electronically at mlr-ea@eroresources.com or by postal mail to the following address:

Montana Department of Environmental Quality
Attn: Jen Lane, MEPA Coordinator
PO Box 200901
Helena, MT 59620-0901
In addition to scoping under MEPA, DEQ is required to consult with and obtain the comments of Montana tribal governments that may be directly impacted by a project under Section 75-1-201(1)(c), MCA. Throughout the environmental review process, DEQ staff would be happy to provide additional information and to discuss any issues that the Council may raise regarding the proposed project. If you have specific questions regarding the project please feel free to contact myself or Jen Lane, the MEPA Coordinator, at any time during the environmental review process:

RE: Tribal Consultation on the Proposed Montana Limestone Resources, LLC Mine Environmental Assessment

Dear Chairman Grey,

You are invited to participate in the Montana Department of Environmental Quality’s (DEQ) environmental review process for Montana Limestone Resources’, LLC (MLR), proposed operating permit for a limestone quarry and plant to produce lime, located about 2.5 miles west of Drummond, Montana, in Granite County (see attached map). Approval of the operating permit would result in the development of the 546-acre permit area. The permit application is available for the public to view at DEQ’s main office in Helena (1520 East 6th Avenue). The application may also be viewed by visiting DEQ’s website (http://deq.mt.gov/Land/hardrock/mlr_apppg).

DEQ determined that MLR’s application was complete and compliant and, on May 13, 2019, issued MLR a draft operating permit for the proposed project and is now preparing an environmental assessment (EA). The EA is being prepared to meet the requirements of the Montana Environmental Policy Act (MEPA) and will analyze the potential impacts of the proposed project.

To: Lane, Jennifer
Subject: Montana Limestone Resources west of Drummond

I received a card in the mail about an Environmental Assessment being conducted on the Drummond site. I don’t know anything about limestone quarry sites. I’m an adjacent land owner and have 3 questions. 1) will the noise be objectionable? Especially at night? At night time we can hear the train clearly even though it is a mile away. 2) dust. We are directly east of the site and the prevailing winds are from the west. Has this been addressed? 3) in a test several years ago our wells ground water flows to the east from the west. Any impact expected to ground water. Thanks
Good Morning

We were recently told by some friends that there was a comment period for your proposed Quarry, and they were informed by mail. Is there going to be an open meeting on this, after comment period? I read the P Burg paper every week and never noticed anything on the comment period, but I may have missed it also.

We live two miles from the proposed area and have full view of the site from my house as we live up on West Mullan Trail. So I do have questions.

Thank you

Tom and Roxie Inman
