

Sanitary Well Caps

It is important to seal the top of a well casing to keep out bugs, excessive dust, and rain splash from entering your well. Go to [Well Cap Fact Sheet](#) to get more information.

To purchase a sanitary well cap, your best bet is to contact a local water well driller or well pump supply. They'll make sure you get a sanitary seal that is sized to match your casing. Contact information for licensed well drillers in Montana can be found by clicking [here](#).

Sanitary well caps can also be found at some hardware stores and through on-line vendors. Here is an example of a couple of on-line well component vendors.

Air vents for Sanitary Well Seals

Sanitary well seals are also called split caps and are suitable for indoor locations. Split caps are equipped with a threaded hole in the top into which an air vent should be installed. The vent can be a down-turned threaded pipe with size 20 mesh screen or a manufactured fitting. An example of a manufactured vent fitting is shown below.
