

DEPARTMENT OF ENVIRONMENTAL QUALITY
Environmental Assessment

Water Protection Bureau

Name of Project: Chico Hot Springs Resort and Day Spa

Type of Project: Discharge of treated domestic wastewater to ground water under the Montana Ground Water Pollution Control System (MGWPCS) permit program.

Location of Project: Chico Hot Springs, two miles south-east of Emigrant, MT

City/Town: Pray, MT

County: Park

Description of Project: This Environmental Assessment (EA) is for renewal of an existing MGWPCS permit (MTX000105) for the Chico Hot Springs Resort and Day Spa (facility). The MGWPCS permit reauthorizes Dance Hall Hill, LLC (permittee) to discharge treated wastewater from a subsurface discharge structure (Outfall 001) into Class I ground water.

All permitted activities take place within an area that has been used for recreational and agricultural purposes since the late 1800's. The applicant has reported that the existing wastewater treatment and disposal system needs to be replaced. The applicant therefore has proposed to fully replace the treatment and disposal system. The replacement treatment (like-for-like) will incorporate a series of conventional septic tanks. The replacement disposal system will be a subsurface pressure dosed drainfield located in the immediate vicinity of the current drainfield.

The discharge structures (current and proposed) are located on the terrace to the west of the intersection of Chico Road and Dance Hall Hill Road: Latitude: 45.34001°; Longitude: -110.69501°; Section 01, Township 06 South, Range 08 East; Park County.

The scope of this EA addresses the installation, operation, and discharge of the wastewater treatment and disposal system. The magnitude and significance of potential impacts are summarized below (bullet #26).

Agency Action and Applicable Regulations: The proposed action is to reissue the existing individual MGWPCS permit that contains effluent limits and effluent monitoring requirements. The permit is issued under the authority of the Montana Water Quality Act (MCA 75-5-101 *et seq.*), the Montana Ground Water Pollution Control System (ARM 17.30.1001-1045), and the Montana Numeric Water Quality Standards in the Department Circular DEQ-7.

Summary of Issues: The purpose of this action is to regulate the discharges of pollutants to state waters from the regulated facility. Issuance of an individual permit will require the permittee to implement, monitor, and manage practices to prevent pollution and the degradation of ground water.

Affected Environment & Impacts of the Proposed Project:

Y = Impacts may occur (explain under Potential Impacts).

N = Not Present or No Impact will likely occur.

IMPACTS ON THE PHYSICAL ENVIRONMENT	
RESOURCE	[Y/N] POTENTIAL IMPACTS AND MITIGATION MEASURES
<p>1. GEOLOGY AND SOIL QUALITY, STABILITY AND MOISTURE: Are soils present which are fragile, erosive, susceptible to compaction, or unstable? Are there unusual or unstable geologic features? Are there special reclamation considerations?</p>	<p>[N] No significant impacts have been identified. The discharge may increase the amount of moisture in the vadose zone. A geological summary is provided in Section II of the MGWPCS Fact Sheet document. All activities take place within or near an area that has been used for recreational and agricultural purposes since the late 1800's. The replacement of the existing wastewater treatment system and drainfield is not likely to alter existing land use.</p>
<p>2. WATER QUALITY, QUANTITY AND DISTRIBUTION: Are important surface or groundwater resources present? Is there potential for violation of ambient water quality standards, drinking water maximum contaminant levels, or degradation of water quality?</p>	<p>[N] No significant impacts have been identified. The ground water in the vicinity of the discharge structure may be Class I ground water with a specific conductance less than 1,000 $\mu\text{S}/\text{cm}$. DEQ has developed effluent limitations based on water quality standards and nondegradation-significance criteria to maintain the beneficial uses of all statewaters (see Fact Sheet).</p> <p>All activities take place within or near an area that has been used for recreational and agricultural purposes since the late 1800's. The replacement drainfield will be located immediately adjacent to the existing drainfield constructed in the 1990's. The replacement drainfield will help mitigate the potential of surfacing sewage occurring from the existing (potentially failing) drainfield. The ditch near the replacement drainfield has been conveyed through the drainfield area within a recently installed culvert.</p> <p>Construction activities may impact water quality by contributing discharges of sediment to surface waters. The permittee may be required to obtain permit coverage under a Montana Pollutant Discharge Elimination System (MPDES) General Permit for Storm Water Discharges Associated with Construction Activity. The permittee may be required to develop and implement a Storm Water Pollution Prevention Plan (SWPPP) which includes</p>

IMPACTS ON THE PHYSICAL ENVIRONMENT	
	<p>best management practices to protect nearby surface waters. Additional information can be found at the following website: http://deq.mt.gov/Water/WPB/mpdes/stormwater</p> <p>All discharge disposal structures must meet the minimum set back requirements of ARM 17.36.323, which includes surface water, flood plains, ditches, and springs. The applicant is encouraged to contact and consult with the Public Water, Subdivision, and State Revolving Fund programs at DEQ: http://deq.mt.gov/Water/PWSUB/pws http://deq.mt.gov/Water/PWSUB/sub http://deq.mt.gov/Water/TFA/srf</p>
<p>3. AIR QUALITY: Will pollutants or particulate be produced? Is the project influenced by air quality regulations or zones (Class I airshed)?</p>	<p>[N] No significant impacts have been identified. Best management practices are encouraged during construction of the replacement treatment system and drainfield to mitigate particulates produced. For additional information, the permittee is encouraged to contact the Montana DEQ Air Resources Management Bureau: http://deq.mt.gov/Air</p>
<p>4. VEGETATION COVER, QUANTITY AND QUALITY: Will vegetative communities be significantly impacted? Are any rare plants or cover types present?</p>	<p>[N] All activities take place within or near an area that has been used for recreational and agricultural purposes since the late 1800's. The replacement of the existing wastewater treatment system and drainfield is not likely to alter current land use.</p> <p>Based on a search of the Natural Heritage Database, there are no vegetative species listed as either S1, S2, LE, or LT (http://fieldguide.mt.gov/statusCodes.aspx#msrc:rank) in the general vicinity of the facility.</p>
<p>5. TERRESTRIAL, AVIAN AND AQUATIC LIFE AND HABITATS: Is there substantial use of the area by important wildlife, birds or fish?</p>	<p>[Y] All activities take place within or near an area that has been used for recreational and agricultural purposes since the late 1800's. The replacement of the existing wastewater treatment system and drainfield is not likely to alter current land use.</p> <p>Based on a search of the Natural Heritage Database, there is two species listed as either S1, S2, LE, or LT (http://fieldguide.mt.gov/statusCodes.aspx#msrc:rank). In the overall regional area surrounding the facility, the following</p>

IMPACTS ON THE PHYSICAL ENVIRONMENT	
	<p>species are listed: <i>Lynx canadensis</i>, and <i>Ursus arctos</i>.</p>
<p>6. UNIQUE, ENDANGERED, FRAGILE OR LIMITED ENVIRONMENTAL RESOURCES: Are any federally listed threatened or endangered species or identified habitat present? Any wetlands? Species of special concern?</p>	<p>[N] See #4 and #5 above. All discharge disposal structures must meet the minimum set back requirements of ARM 17.36.323, which includes surface water, flood plains, ditches and springs. The applicant is encouraged to contact and consult with the Public Water, Subdivision and State Revolving Fund programs at DEQ: http://deq.mt.gov/Water/PWSUB/pws http://deq.mt.gov/Water/PWSUB/sub http://deq.mt.gov/Water/TFA/srf</p> <p>Site and habitat inventories for the applicable species were recommended in consultation with the Montana Natural Heritage Program. The applicant is encouraged to contact and consult with this program or other Natural Resource Information Programs available at the Montana State Library: http://nris.msl.mt.gov/</p>
<p>7. SAGE GROUSE EXECUTIVE ORDER: Is the project proposed in core, general or connectivity sage grouse habitat, as designated by the Sage Grouse Habitat Conservation Program (Program) at: https://sagegrouse.mt.gov/</p>	<p>[N] The project site is not listed as being located within sage grouse habitat. DEQ referred to the Habitat and Occurrence mapping program at https://sagegrouse.mt.gov/projects/. If there are questions about Sage Grouse at this site, the applicant must contact and consult with the Sage Grouse Habitat Conservation Program at: https://sagegrouse.mt.gov/.</p>
<p>8. HISTORICAL AND ARCHAEOLOGICAL SITES: Are any historical, archaeological or paleontological resources present?</p>	<p>[N] No significant impacts have been identified. The replacement of the existing wastewater treatment system and drainfield will be in the immediate vicinity of the existing system.</p> <p>A general recommendation by the Montana State Historic Preservation Office (MSHPO) states that in the event that cultural materials are inadvertently discovered, the permittee should contact the MSHPO office for investigation.</p>
<p>9. AESTHETICS: Is the project on a prominent topographic feature? Will it be visible from populated or scenic areas? Will there be excessive noise or light?</p>	<p>[N] No significant impacts have been identified. All activities take place within or near an area that has been used for recreational and agricultural purposes since the late 1800's. The replacement of the existing wastewater treatment system and drainfield is not likely to alter existing land use. On-site treatment</p>

IMPACTS ON THE PHYSICAL ENVIRONMENT	
	and disposal systems are subsurface and not easily visible.
10. DEMANDS ON ENVIRONMENTAL RESOURCES OF LAND, WATER, AIR, OR ENERGY: Will the project use resources that are limited in the area? Are there other activities nearby that will affect the project? Will new or upgraded power line or other energy source be needed?	[Y] All activities take place within or near an area that has been used for recreational and agricultural purposes since the late 1800's. Historic and future activities include heavy use of the nearby springs for domestic, recreational, and irrigation uses. The replacement of the existing wastewater treatment system and drainfield is not likely to increase the existing demand on resources.
11. IMPACTS ON OTHER ENVIRONMENTAL RESOURCES: Are there other activities nearby that will affect the project?	[N] No significant impacts have been identified.

IMPACTS ON THE HUMAN ENVIRONMENT	
12. HUMAN HEALTH AND SAFETY: Will this project add to health and safety risks in the area?	[Y] Replacement of the older (potentially failing) subsurface drainfield will help prevent the likelihood of effluent surfacing within a heavily used recreation area.
13. INDUSTRIAL, COMMERCIAL AND AGRICULTURAL ACTIVITIES AND PRODUCTION: Will the project add to or alter these activities?	[N] No significant impacts have been identified.
14. QUANTITY AND DISTRIBUTION OF EMPLOYMENT: Will the project create, move or eliminate jobs? If so, estimated number.	[N] A few temporary jobs may be created during construction of the replacement wastewater system.
15. LOCAL AND STATE TAX BASE AND TAX REVENUES: Will the project create or eliminate tax revenue?	[N] No significant impacts have been identified.
16. DEMAND FOR GOVERNMENT SERVICES: Will substantial traffic be added to existing roads? Will other services (fire protection, police, schools, etc.) be needed?	[N] Traffic may increase during the construction of the replacement wastewater treatment systems and discharge structures. Once construction is complete, there may be minimal traffic for the operation and maintenance of the wastewater treatment system.

IMPACTS ON THE HUMAN ENVIRONMENT	
17. LOCALLY ADOPTED ENVIRONMENTAL PLANS AND GOALS: Are there State, County, City, USFS, BLM, Tribal, etc. zoning or management plans in effect?	[N] No significant impacts have been identified.
18. ACCESS TO AND QUALITY OF RECREATIONAL AND WILDERNESS ACTIVITIES: Are wilderness or recreational areas nearby or accessed through this tract? Is there recreational potential within the tract?	[N] No significant impacts have been identified.
19. DENSITY AND DISTRIBUTION OF POPULATION AND HOUSING: Will the project add to the population and require additional housing?	[N] No significant impacts have been identified.
20. SOCIAL STRUCTURES AND MORES: Is some disruption of native or traditional lifestyles or communities possible?	[N] No significant impacts have been identified.
21. CULTURAL UNIQUENESS AND DIVERSITY: Will the action cause a shift in some unique quality of the area?	[N] No significant impacts have been identified.
22. OTHER APPROPRIATE SOCIAL AND ECONOMIC CIRCUMSTANCES:	[N] No significant impacts have been identified.
23(a). PRIVATE PROPERTY IMPACTS: Are we regulating the use of private property under a regulatory statute adopted pursuant to the police power of the state? (Property management, grants of financial assistance, and the exercise of the power of eminent domain are not within this category.) If not, no further analysis is required.	[N] No significant impacts have been identified.
23(b). PRIVATE PROPERTY IMPACTS: Is the agency proposing to deny the application or condition the approval in a way that restricts the use of the regulated person's private property? If not, no further analysis is required.	[N] No significant impacts have been identified.
23(c). PRIVATE PROPERTY IMPACTS: If the answer to 23(b) is affirmative, does the agency have legal discretion to impose or not impose the proposed restriction or discretion as to how the restriction will be imposed? If not, no further analysis is required. If so, the agency must determine if there are alternatives that would reduce, minimize or eliminate the restriction on the use of private property, and analyze such alternatives. The agency must disclose the potential costs of identified restrictions.	[N] No significant impacts were identified in 23(b).

24. **Description of and Impacts of other Alternatives Considered:**

- A. No Action: Under the “No Action” alternative, the Department would not issue this ground water discharge permit. “No Action” may lead to the creation of non-permitted wastewater systems. This may result in a net negative impact to ground water quality as the permit would prevent pollution and degradation of state waters.
- B. Approval with Modification: The Department has not identified any necessary modifications to grant approval.

25. **Cumulative Effects:**

Cumulative effects were analyzed as part of this EA and permitting determination. No cumulative impacts have been identified. The Department notes the following:

- There are no other permitted discharges to this aquifer in the vicinity of the facility.
- There are no other known discharges downgradient (vicinity) of Outfall 001 (see Fact Sheet).
- No impacts were identified based on ambient (receiving) and downgradient ground water conditions at the time of this analysis.
- Ambient (receiving) ground water quality conditions were factored into the assimilative capacity determination which is reflected in the proposed effluent limitations.
- The permittee is required to reapply to continue permit coverage. Ambient (receiving) and downgradient ground water quality monitoring will be reanalyzed during each permit renewal.

The ground water in the vicinity of the existing discharge structure is Class I ground water with a specific conductance less than 1,000 $\mu\text{S}/\text{cm}$. DEQ has developed effluent limitations based on water quality standards to maintain the beneficial uses of this state ground water. The permit prohibits pollution and degradation of state waters. The permit includes monitoring, reporting, and corrective action requirements to establish, confirm, and maintain compliance with permit limitations. Please refer to the Fact Sheet document for additional information.

26. **Summary of Magnitude and Significance of Potential Impacts:**

Impacts were assessed with the assumption that the facility will comply with the terms and conditions of the permit. Violations of the permit could lead to significant adverse impacts to state waters. Violations of the permit are not an effect of the agency action since the permit itself forbids such activities. However, the Department has taken steps to ensure that violations do not occur. The Department provides assistance to applicants in understanding and implementing the requirements of the permit. The Department also conducts periodic inspections of permitted facilities, and identifies potential problems

with design or management practices. If violations of the permit do occur, the Department will take appropriate action under the water quality act (75-5-617, MCA). Enforcement sanctions for violations of the permit include injunctions, civil and administrative penalties, and cleanup orders.

27. **Preferred Action Alternative and Rationale:** The preferred action is to reissue the existing individual MGWPCS discharge permit. This action is preferred since the permit provides a regulatory mechanism for protecting ground water quality by applying effluent limits and monitoring requirements to the discharged wastewater.

Recommendation for Further Environmental Analysis:

EIS More Detailed EA No Further Analysis

Rationale for Recommendation: An EIS is not required under the Montana Environmental Policy Act because the project lacks significant adverse effects to the human and physical environment.

28. **Public Involvement:**

Legal notice information for water quality discharge permits are listed at the following website: <http://deq.mt.gov/Public/notices/wqnotices>. Public comments on this proposal are invited any time prior to close of business on November 10, 2016. Comments may be directed to:

DEQWPBPublicComments@mt.gov

or at:

Water Protection Bureau
PO Box 200901
Helena, MT 59620

All comments received or postmarked prior to the close of the public comment period will be considered in the formulation of the final permit. DEQ will respond to all substantive comments pertinent to this permitting action and may issue a final decision within thirty days of the close of the public comment period.

All persons, including the applicant, who believe any condition of the draft permit is inappropriate, or that DEQ's tentative decision to deny an application, terminate a permit, or prepare a draft permit is inappropriate, shall raise all reasonably ascertainable issues and submit all reasonably available arguments supporting their position by the close of the public comment period (including any public hearing). All public comments received for this draft permit will be included in the administrative record and will be available for public viewing during normal business hours.

Copies of the public notice were mailed to the applicant, state and federal agencies and interested persons who have expressed interest in being notified of permit actions. A copy of the distribution list is available in the administrative record for this draft permit. Electronic copies of the public notice, draft permit, fact sheet, and draft environmental assessment are available at the following website:
<http://deq.mt.gov/Public/notices/wqnotices>.

Any person interested in being placed on the mailing list for information regarding this permit may contact the DEQ Water Protection Bureau at (406) 444-3080 or email DEQWPBPublicComments@mt.gov. All inquiries will need to reference the permit number (MTX000105), and include the following information: name, address, and phone number.

During the public comment period provided by the notice, DEQ will accept requests for a public hearing. A request for a public hearing must be in writing and must state the nature of the issue proposed to be raised in the hearing.
