DEQ is proposing a draft Montana Pollutant Discharge Elimination System (MPDES) permit renewal for the Town of Stevensville Wastewater Treatment Plant. The oxidation ditch activated sludge mechanical treatment plant is a minor publicly owned treatment works serving approximately 1,900 people. Primary separation is incorporated, followed by secondary treatment and ultraviolet disinfection. The design flow for the facility is 0.30 million gallons per day (mgd) with average daily flows of 0.23 mgd continuous discharge to an intermittent side channel of the Bitterroot River.

Since construction from a facultative lagoon to a mechanical plant in 1978, the facility has undergone several upgrades. However, the facility is not a new or increased source. The proposed permit requires periodic self-monitoring and reporting of discharge quality. This permit and fact sheet will be submitted to the EPA for approval.
