

To the Montana Department of Environmental Quality:

I urge you to choose Alternative 10 for the cleanup of the Colstrip Units 1 & 2 coal ash ponds. The only way to guarantee the long-term safe and effective cleanup of these ponds is to require the power plant owners to excavate the ash and move it to a state-of-the-art landfill far above the groundwater table. Furthermore, you should require an adequate bond for the full cleanup now in order to protect Montana taxpayers *later*. Let's get this right the first time!

Thank you,

Mary & Tom Steenberg

Please don't let cleanup costs fall on taxpayers, an adequate bond for cleanup of ash is the only way to ensure this. Thank you for the right decision.

To the Montana Department of Environmental Quality:

I urge you to choose Alternative 10 for the cleanup of the Colstrip Units 1 & 2 coal ash ponds. The only way to guarantee the long-term safe and effective cleanup of these ponds is to require the power plant owners to excavate the ash and move it to a state-of-the-art landfill far above the groundwater table. Furthermore, you should require an adequate bond for the full cleanup now in order to protect Montana taxpayers *later*. Let's get this right the first time!

To the Montana Department of Environmental Quality:

I urge you to choose Alternative 10 for the cleanup of the Colstrip Units 1 & 2 coal ash ponds. The only way to guarantee the long-term safe and effective cleanup of these ponds is to require the power plant owners to excavate the ash and move it to a state-of-the-art landfill far above the groundwater table. Furthermore, you should require an adequate bond for the full cleanup now in order to protect Montana taxpayers *later*. Let's get this right the first time!

Thank you,

Ralph Stephens

To the Montana Department of Environmental Quality

I urge you to choose Alternative 10 for the cleanup of the Colstrip Units 1 & 2 coal ash ponds. The only way to guarantee the long-term safe and effective cleanup of these ponds is to require the power plant owners to excavate the ash and move it to a state-of-the-art landfill far above the groundwater table. Furthermore, you should require an adequate bond for the full cleanup now in order to protect Montana taxpayers *later*. Let's get this right the first time!

Thank you,

To the Montana Department of Environmental Quality:

I urge you to choose Alternative 10 for the cleanup of the Colstrip Units 1 & 2 coal ash ponds. The only way to guarantee the long-term safe and effective cleanup of these ponds is to require the power plant owners to excavate the ash and move it to a state-of-the-art landfill far above the groundwater table. Furthermore, you should require an adequate bond for the full cleanup now in order to protect Montana taxpayers *later*. Let's get this right the first time!

Thank you,

Ella Robson *antiquity22001@yahoo.com*

To the Montana Department of Environmental Quality:

I urge you to choose Alternative 10 for the cleanup of the Colstrip Units 1 & 2 coal ash ponds. The only way to guarantee the long-term safe and effective cleanup of these ponds is to require the power plant owners to excavate the ash and move it to a state-of-the-art landfill far above the groundwater table. Furthermore, you should require an adequate bond for the full cleanup now in order to protect Montana taxpayers *later*. Let's get this right the first time!

Thank you,

Larry G. Peterman

I urge you to choose Alternative 10 for the cleanup of the Colstrip Units 1 & 2 coal ash ponds. The only way to guarantee the long-term safe and effective cleanup of these ponds is to require the power plant owners to excavate the ash and move it to a state-of-the-art landfill far above the groundwater table. Furthermore, you should require an adequate bond for the full cleanup now in order to protect Montana taxpayers *later*. Let's get this right the first time!

To the Montana Department of Environmental Quality

I urge you to choose Alternative 10 for the cleanup of the Colstrip Units 1 & 2 coal ash ponds. The only way to guarantee the long-term safe and effective cleanup of these ponds is to require the power plant owners to excavate the ash and move it to a state-of-the-art landfill far above the groundwater table. Furthermore, you should require an adequate bond for the full cleanup now in order to protect Montana taxpayers *later*. Let's get this right the first time!

To the Montana Department of Environmental Quality:

I urge you to choose Alternative 10 for the cleanup of the Colstrip Units 1 & 2 coal ash ponds. The only way to guarantee the long-term safe and effective cleanup of these ponds is to require the power plant owners to excavate the ash and move it to a state-of-the-art landfill far above the groundwater table. Furthermore, you should require an adequate bond for the full cleanup now in order to protect Montana taxpayers *later*. Let's get this right the first time!

Thank you,

Patricia Simmons

To the Montana Department of Environmental Quality:

I urge you to choose Alternative 10 for the cleanup of the Colstrip Units 1 & 2 coal ash ponds. The only way to guarantee the long-term safe and effective cleanup of these ponds is to require the power plant owners to excavate the ash and move it to a state-of-the-art landfill far above the groundwater table. Furthermore, you should require an adequate bond for the full cleanup now in order to protect Montana taxpayers *later*. Let's get this right the first time!

Thank you,

(include your signature, name, address, and email address)

(include your signature, name, address, and email address)

To the Montana Department of Environmental Quality:

I urge you to choose Alternative 10 for the cleanup of the Colstrip Units 1 & 2 coal ash ponds. The only way to guarantee the long-term safe and effective cleanup of these ponds is to require the power plant owners to excavate the ash and move it to a state-of-the-art landfill far above the groundwater table. Furthermore, you should require an adequate bond for the full cleanup now in order to protect Montana taxpayers *later*. Let's get this right the first time!

Thank you,

I urge you to choose Alternative 10 for the cleanup of the Colstrip Units 1 & 2 coal ash ponds. The only way to guarantee the long-term safe and effective cleanup of these ponds is to require the power plant owners to excavate the ash and move it to a state-of-the-art landfill far above the groundwater table. Furthermore, you should require an adequate bond for the full cleanup now in order to protect Montana taxpayers *later*. Let's get this right the first time!

Thank you,

MT
