

Addendum to Climate Analysis Subgroup Recommendations:

The Climate Analysis Subgroup has further discussed these recommendations:

1. MDEQ establish clear thresholds for minor vs. major (EA vs. EIS) climate analysis with clear *de minimus* limits and explanation of its reasons;
2. MDEQ provide context for characterizing emissions from agency actions, whether through a Social Cost of Greenhouse Gas Emissions (SC-GHG) or some other metric;
3. MDEQ include Scope 2 & 3 analysis to capture the full life cycle of emissions from agency actions.
