

Montana DEQ Class C Rated Operators

Class C Operator Name	Date Started	Date Trained	Operator Signature	Trainer Initials

Each designated Class C operator must either: be trained by a Class A or Class B operator; complete a training program; or pass a comparable examination. The training option chosen must teach or evaluate the Class C operator's knowledge to take appropriate actions (including notifying appropriate authorities) in response to emergencies or alarms caused by spills or releases resulting from the operation of the UST system. Again, Class C operators must be trained before assuming duties. A record of all Class A, Class B, and Class C operators must be kept onsite or readily available. Copies of the TankHelper certificates meet this requirement. **A list of Class C operators must also be available.**
