Clarification on Energy Act Tanks and the Facility Summary Sheet information

When looking for information on whether a tank system requires sump testing due to Energy Act (EA) testing requirements, you should look for this information in two places. If a tank is installed after November 26, 2009, the Energy Act field will show a YES indicating that the tank and piping are both designated as EA systems. If, however, the tank is installed before 11/26/2009 and the piping is installed AFTER 11/26/2009, the Energy Act field will show a NO indicating that the TANK is not EA but the PIPING is EA. This means that the piping and sumps need testing per Energy Act requirements.

The example below shows that the Tank is not EA, but the Piping is EA based on the Piping Installed Date field.
