

The Administrative Rules of Montana require an asbestos inspection in all facilities prior to demolition or renovation activities.

Please contact the Asbestos Control Program within two working days, at the number below, to provide verification an asbestos inspection has been performed, or to obtain assistance in regulatory compliance.

Pursuant to Administrative Rule of Montana (ARM) 17.74.354(7)

Failure to obtain an inspection prior to demolition or renovation of a facility is a violation of ARM Title 17, Chapter 74, subchapter 3. You must address a violation by obtaining an inspection as soon as possible to evaluate the presence of asbestos, and before any additional renovation or demolition activities occur. The inspection must be conducted in accordance with ARM 17.74.354(3) and 17.74.354(7). A written report summarizing the sampling and analysis procedures and findings, as well as the inspector's recommendations must be submitted to the department before further renovation or demolition of the facility occurs.
